The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin as further evidenced by Baileys and in view of Taylor.

Lin discloses combining palm oil with unsaturated oils such as soybean oil, corn and sunflower oils in proportions of 9:1 to 7:3. The blended oils are then cooled to 20C to 3C for crystallization and then separated by filtration. Although the fatty acid content of the unsaturated oil is not mentioned in Lin, it is well known in the art to fall within the levels of linoleic, oleic and linolenic that is set forth in claim 1. Further applicant includes these oil sources as selected oils in claim 8. The claims appear to differ from Lin in the recitation of the use of heating in the crystallization process. At page 74, Taylor teaches the advisability of heating palm oil to a of at least 70C prior to cooling in order to melt all of the crystals typically found in the oil. Thus with the reference before him, it would have been obvious to heat the oil of Lin to a temperature of at least 70C in order to

form a uniform liquid blend oils for fractionation upon cooling. The filtration step of Lin is taken to be a low-pressure filter press in claim 2. The ratio of saturation and unsaturation in the fatty acids would have been an obvious function of the amount of each of the oils used in the starting blend. The crystallization would have been an obvious function of the cooling rate used in the process. Finally the used of the oils in foods would have been an obvious matter of choice with regard to the particular edible oil that was available.

No claim is allowed.
